

Project Sharing Application

Technology:

1. Frontend: React
2. Backend: Node/Express-js
3. Database: Mongo DB (atlas or local)

Requirements:

1. Users can log in/signup in the application.
2. User can see other user's projects in the home page.
3. User have an option to submit project by submitting a form.
4. User is able to submit a form to showcase his/her project with project title, developer name, description, and hosted URL.
5. On submitting form these details should be saved in the database.
6. Frontend homepage of application should be refreshed with each submission of form and display all projects from database in the form of list or cards on home page.

****-----Best Of luck-----****
